# FOODIETECTURE

## Experiencing New Architecture Dietry

### Agenda

The main agenda would be that of exploring edible architecture. We would like to explore pushing the boundaries of creating structural or architectural elements using edible produce. One key focus area would be that of exploring the medium, materiality and sciences of food

### Production

We hope to produce architecture models, be able to put together a futuristic cookbook of all the various creations, and hopefully to have a special dinner where the creations are produced for the public

### Collaborator

Hollings Faculty  
(MMU)

This could take a form of partnering architecture students with culinary students for a workshop whereby both explore how food can be created or presented in much more architectural and spatial dimensions, and at the same time pushing the methods of food production in order to achieve these architectural ideas

Students : Luke Carver, Safri Shamsuddin, Farhad Bakht, Daniel Lee
