

## AGENDA

The Allotment of the Future will change how people view food, not only as part of our sustenance but also as part of our cultural and civic aspirations. The Allotment of the Future is a public platform to experience the future of homegrown food production and to help urban dwellers to re-imagine their role in supporting a climate resilient city.

## MANIFESTO

Where possible, the Allotment of the Future will creatively articulate the circular economy in practice. The site will demonstrate ways to achieve a low carbon footprint, including reuse of waste and energy and building from locally and sustainably sourced materials. This follows in the tradition of allotments but transforming it by making visible the innovative use of technology to support a low carbon footprint and increased domestic food production.

## PRODUCTION

This is a design and build challenge with great potential to gain or further enhance hands on skills, design knowledge, quantity surveying, liaising with manufactures and working on a live project with our collaborators in the city centre of Manchester.
