

MANCHESTER SCHOOL OF ARCHITECTURE

Agenda

Building upon ownHaus real estate model and their affordable resilient living manifesto, our group is committed to work together towards an intersectional design concept to benefit future living communities. This live project will study the ownHaus token funding model to enable disintermediation of the existing real estate system and to create a more affordable co-living prototype.

In the view of evolving content when developing the ownHaus design concept, we are aiming to visually express the emerging work through infographics, diagrams, collages, which can later be of use to our collaborators as well.

Skills

Our project will enrich your graphic skills with regards to collaging in Photoshop, presenting in InDesign, creating infographics in Illustrator, but also outline ideas in AutoCad and test massings in Sketch-Up. Developing a concept design will grow your creativity and research skills, but also your critical thinking.

Collaborators

Steven Lock • ownHaus
Rob Evans • Project 3 Architects
Lisa Kinch • Project 3 Architects

Our Team

Aadil Nagdawala
Adwoa Botchey
Daryl Law
Henry Mole
Irina Munteanu
Maria Gorreth Tavares Duarte
